Share the outcomes of research with the local community.

Exercise using the KJ method

Research studies at Shimane University Medical School

2nd grade research study applying scientific knowledge.

1st grade nourish scientific literacy.

A creative proposal that facilitates sustainable global progress.

Research study on global projects.

In the first year students gain capacity to think logically through interactive studies. Their interest in math and science are peaked through visits and research work at Shimane University Medical School and also through long-distance classes from research institutions abroad. During sophomore and senior grades, students work on research projects applying scientific knowledge acquired through cooperation with universities, institutes and companies etc. They make presentations in English regarding their results, not only at our school but also outside the school, and disseminate them to local society cooperation with Izumo Science Center.

A liberal-arts education regarding the local community and a global society.

Lecture by a Nobel Prize winner Dr. Ei-ichi Negishi

Skype conference with foreign students

Study tour in Santa Clara

Debriefing session at local merchants' association

SGH

In the first year students develop in-depth knowledge regarding their local areas as well as international society through field studies and lectures by specialists. During sophomore and senior grades, they conduct a study with the theme "agendas in international society", closely working with universities and corporations etc. They disseminate their results to the world by sharing their research with overseas high school students, university students, and post-graduate students from abroad.

Feedback at local farming households

Experiments in English

English debate tournaments on campus
